

## LV14 – WAN PPP enkapsulacija – rad na uređajima

### PRIPREMA

#### 1. Password Authentication Protocol (PAP):

Sloj djelovanja: PAP je sloj veze podataka (data link layer) protokol.

Opis: PAP je jednostavan i temelji se na lozinkama. Klijent šalje korisničko ime i lozinku poslužitelju. Ako se korisničko ime i lozinka podudaraju, poslužitelj odobrava PPP sesiju. Međutim, PAP nije siguran jer lozinke putuju u otvorenom tekstu, što omogućava napadačima da ih presretnu.

Prednosti:

Jednostavan za implementaciju.

Podržan na svim operacijskim sustavima.

Nedostaci:

Lozinke se prenose nekriptirano.

Ranjiv na napade kao što su pogađanje lozinki i prislушкиvanje.

#### 2. Challenge Handshake Authentication Protocol (CHAP):

Sloj djelovanja: CHAP također djeluje na sloju veze podataka.

Opis: CHAP koristi izazovno-ručni mehanizam za autentifikaciju. Periodički provjerava identitet korisnika. Evo kako CHAP funkcioniра:

Klijent šalje zahtjev za autentifikacijom poslužitelju.

Poslužitelj generira nasumični izazov (challenge) i šalje ga klijentu.

Klijent koristi svoju lozinku i izazov za stvaranje kriptografskog hash-a.

Klijent šalje hash poslužitelju.

Poslužitelj provjerava hash. Ako se podudara s očekivanim hash-om, autentifikacija je uspješna.

Prednosti:

Koristi kriptografske hash funkcije za poboljšanu sigurnost. Sigurniji od PAP-a.

Nedostaci:

Ne podržava vrlo stare operacijske sustave.

### VJEŽBA

4.

The screenshot shows a Windows Command Prompt window titled "Command Prompt". The window has a blue header bar with the title and standard window controls (minimize, maximize, close). Below the header is a menu bar with tabs: Physical, Config, Desktop, Programming, and Attributes. The "Desktop" tab is currently selected. The main area of the window contains the command-line output of several ping commands. The output shows that pings to 192.168.100.1 and 192.168.200.10 result in "Destination host unreachable" errors. Pings to 192.168.250.10 show varying levels of loss (100% or 25%) and round-trip times (2ms to 23ms).

```
Pinging 192.168.250.10 with 32 bytes of data:  
  
Reply from 192.168.100.1: Destination host unreachable.  
  
Ping statistics for 192.168.250.10:  
    Packets: Sent = 4, Received = 0, Lost = 4 (100% loss),  
  
C:\>ping 192.168.200.10  
  
Pinging 192.168.200.10 with 32 bytes of data:  
  
Reply from 192.168.100.1: Destination host unreachable.  
  
Ping statistics for 192.168.200.10:  
    Packets: Sent = 4, Received = 0, Lost = 4 (100% loss),  
  
C:\>ping 192.168.250.10  
  
Pinging 192.168.250.10 with 32 bytes of data:  
  
Request timed out.  
Reply from 192.168.250.10: bytes=32 time=2ms TTL=125  
Reply from 192.168.250.10: bytes=32 time=23ms TTL=125  
Reply from 192.168.250.10: bytes=32 time=2ms TTL=125  
  
Ping statistics for 192.168.250.10:  
    Packets: Sent = 4, Received = 3, Lost = 1 (25% loss),  
Approximate round trip times in milli-seconds:  
    Minimum = 2ms, Maximum = 23ms, Average = 9ms
